"Interleukin (IL)-22, a novel human cytokine that signals

interferon receptor-related proteins CRF2-4 and IL-22R.";

J. Biol. Chem. 275:31335-31339 (2000)

-1-FUNCTION: Receptor for IL10 and IL22. Serves as an accu-

essential for the active IL10 receptor complex and to

IL10-induced signal transduction events.
                                                                                                                                                                                                                                                                                                                                                                                                 PubMed=15340161; DOI=10.1110/ps.04682504; Zhang Z., Henzel W.J.; "Signal peptide prediction based on analy verified cleavage sites.";
